

# Report on the EPN Analysis

Heinz Habrich

*EPN Analysis Coordinator*

Bundesamt für Kartographie und  
Geodäsie, Frankfurt, Germany

# Introduction

---

- Changes since 3<sup>th</sup> LAC Workshop
- EPN Reference Frame Alignment
- Exclusions in the combined solution
- EPN contribution to TIGA Pilot Project

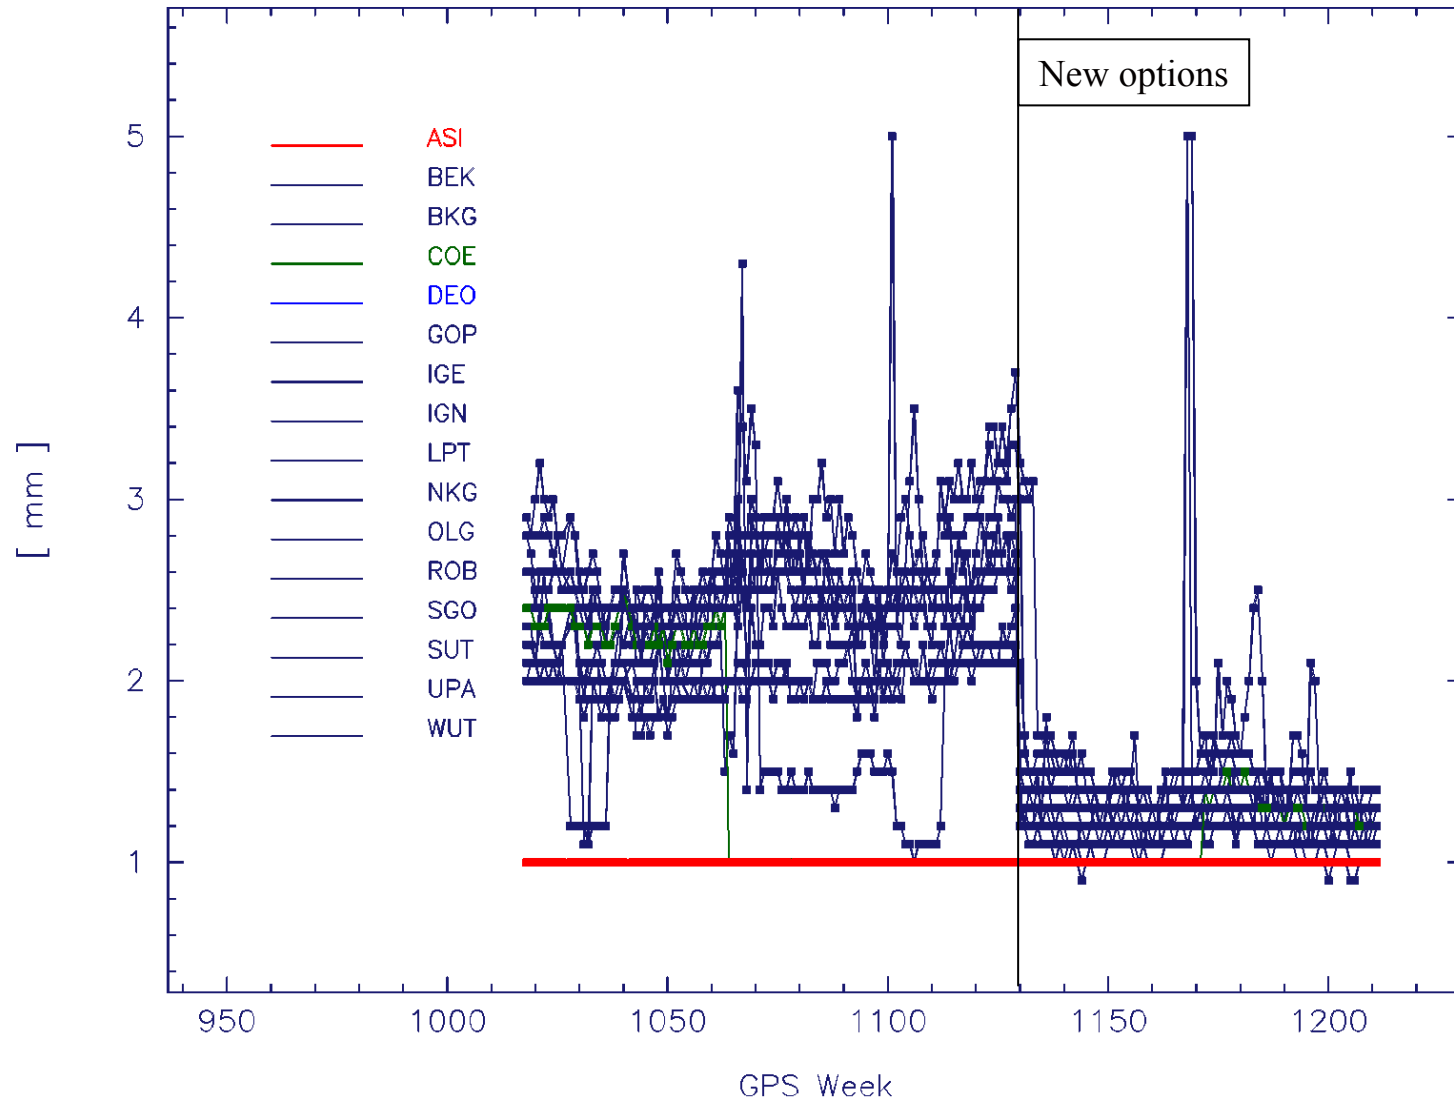

# EPN Processing History

31 May – 01 June 2001	<ul style="list-style-type: none"><li>■ 3rd Local Analysis Center Workshop, Warsaw, Poland</li></ul>
2 Sep 2001(week 1130)	<ul style="list-style-type: none"><li>■ Introduction of new processing options, following the minutes of the 3rd LAC Workshop, Warsaw</li><li>■ Submission of SINEX files from the LACs fixed to the ITRFxx (contribution to Troposphere Special Project)</li><li>■ New analysis center IGE introduced into the combined solution</li></ul>
14 Oct 2001 (week 1136)	<ul style="list-style-type: none"><li>■ New product generation: Densification of global IGS weekly solution, product not official and not public available</li><li>■ New product generation: Transformation of the EUREF fixed solution from ITRF into ETRF, product not official and not public available</li></ul>
November 2001	<ul style="list-style-type: none"><li>■ Proceedings of the 3rd Local Analysis Center Workshop published in the Reports on Geodesy No3 (58), 2001, Warsaw University of Technology</li></ul>
2 Dec 2001(week 1143)	<ul style="list-style-type: none"><li>■ Change from ITRF97 to ITRF2000 for reference frame realization, fixed solution and troposphere parameter affected</li><li>■ New analysis center SGO introduced into the combined solution, Bernese Software used by SGO</li></ul>

# EPN Processing History (Cont.)

12 Jan 2002(week 1149)	■ New product generation: Densification of global IGS cumulative solution, product not official and not public available
5 – 8 June 2002	■ EUREF 2002 Symposium, Ponta Delgada, Portugal
1 Sep 2002 (week 1182)	■ New analysis center SUT has been introduced. It uses the Bernese GPS Software.
4 – 7 July 2003	■ EUREF 2003 Symposium, Toledo, Spain

RMS of Unit Weight in SINEX File (1 mm = default/5 mm = max)

# LAC's versus Combined Solutions – Mean RMS of Helmert Residuals

# RMS of Unit Weight – Weekly Free Network Combined Solution

# Submission of Constraint SINEX Solutions

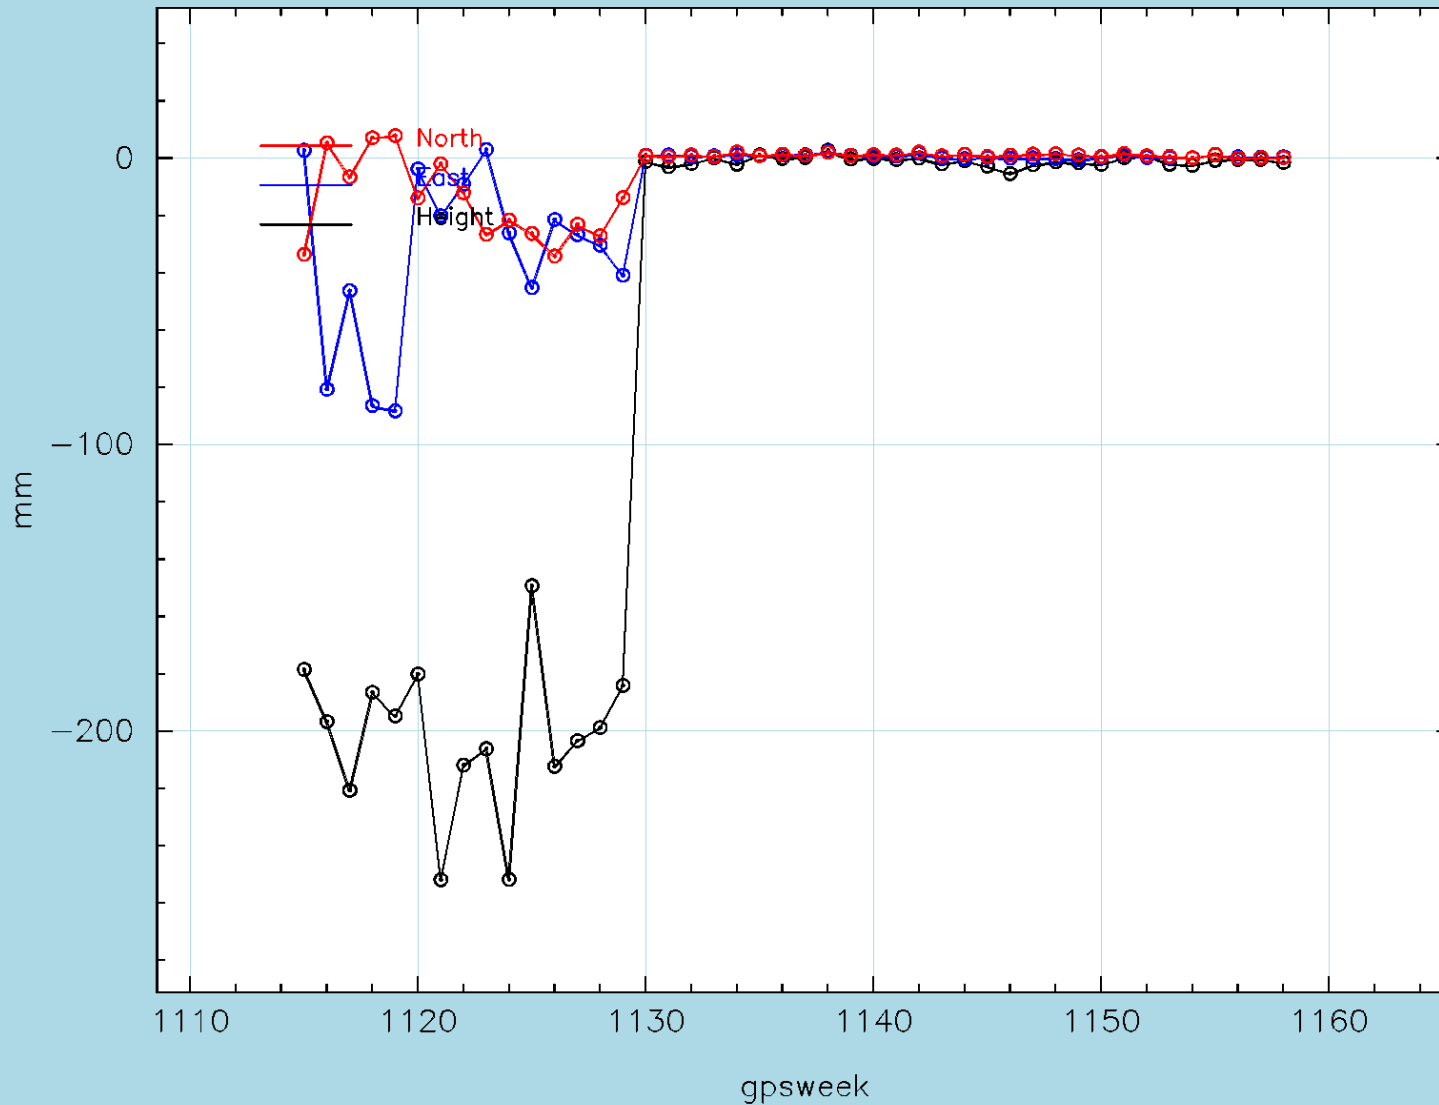

---

## Motivation:

- Alignment of all LAC solutions to a common terrestrial reference frame (realized by submission of solutions, which are constraint to ITRF)
- Reduction of biases in the combination of the station specific troposphere parameters (Troposphere Special Project) through „coordinate re-substitution“
- Constraints will be removed before the combination (no effect on combined coordinate product)
- Realized since week 1130

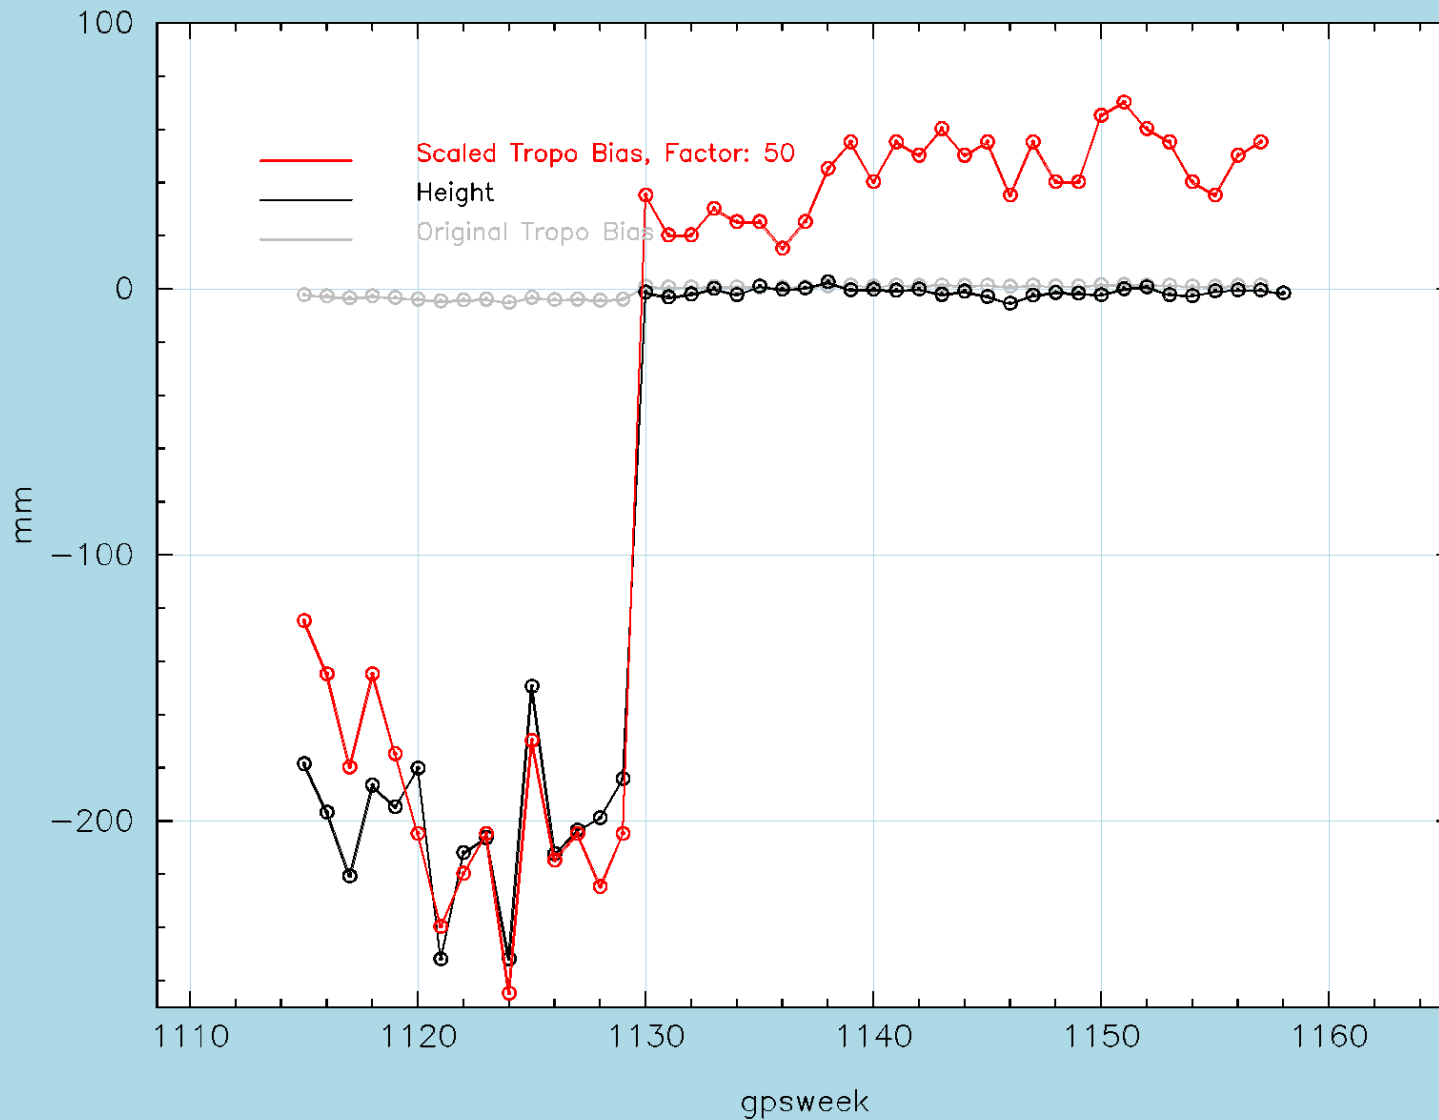

# SINEX Coordinate Comparison for BKG, weeks 1115 – 1158

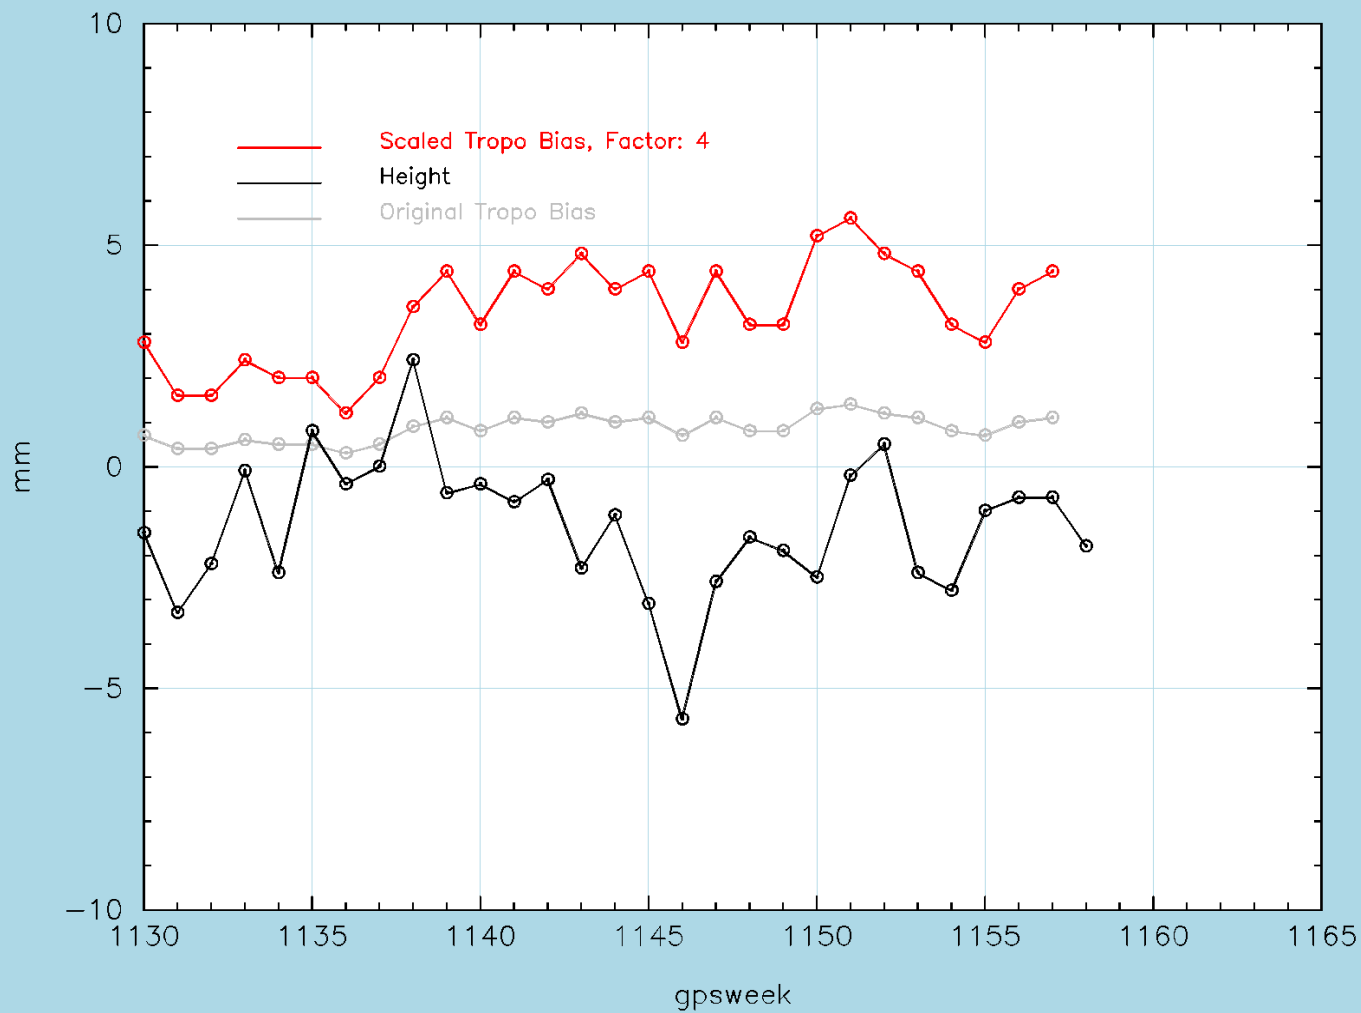

► BKG versus EUREF Combination ◀

# Height Misalignment and Tropo. Bias for BKG, weeks 1119 – 1159

Height Misalignment and Tropo. Bias for BKG, weeks 1119 - 1159

# Next Steps for Constraint SINEX Solution

---

- The variation of the LAC specific trop. biases significantly improved after the coordinate re-substitution in the weekly solutions of each LAC
- Systematic variation of the biases may be reduced, if the combined EPN solution would be used for the coordinate re-substitution.
- Ask the LACs to calculate such a solution for test purpose.
- Detailed study of the scaling factor between trop. parameter and heights.

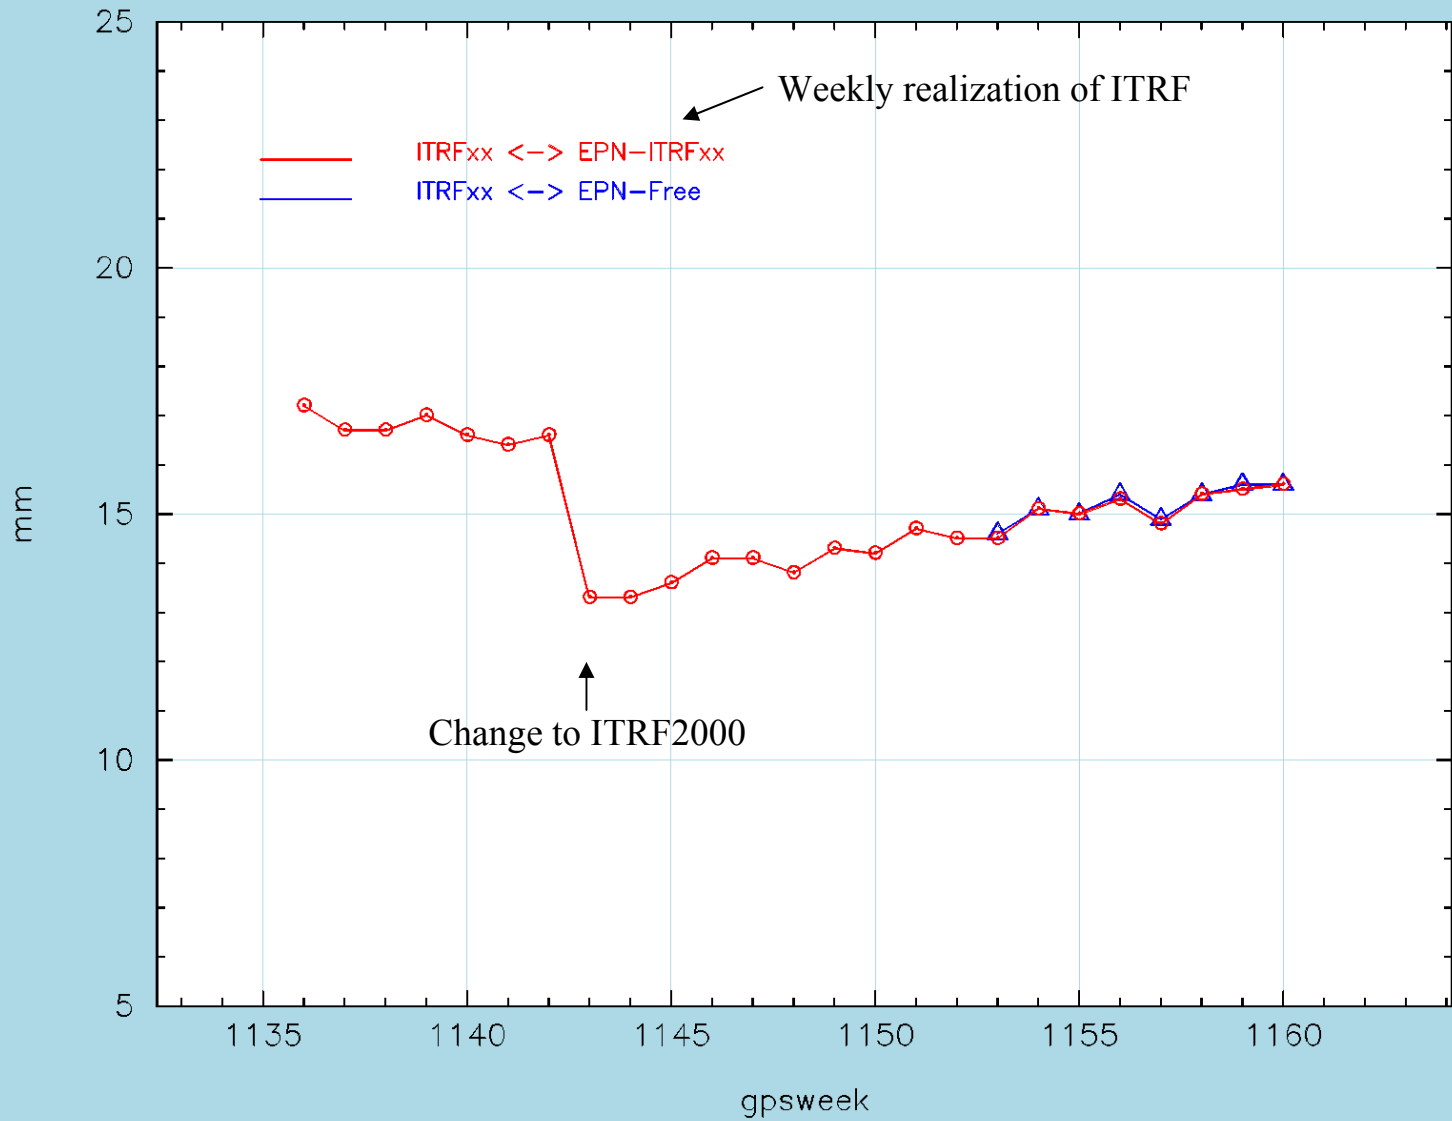

# Change from ITRF97 to ITRF2000

---

## Motivation:

- IGS introduced ITRF2000 in week 1143
- All IGS products (satellite orbits, EOP, station coordinates,..) in the new reference frame
- EPN introduced ITRF2000 at the same week to be consistent to the IGS and to take benefit from the improved reference frame

# RMS of 7 Parameter Helmert Transformation

(c) BKG euref 22-May-2002 16:01

# EPN Reference Frame Alignment

---

## Motivation:

- IGS initiative to realize a dense global reference network; fully consistent to the IGS products (orbits, EOP, reference frame,..)

## Idea:

- Alignment of Regional GPS Networks (e.g., EPN) to the global IGS solution
- Regional Densification of the Global IGS Network

# IGS 2002 Workshop Contributions

---

## Alignment of regional networks:

- Z. Altamimi: Using the „free network conditions“ for network alignment
- M. Craymer, R. Ferland: Using the Helmert Transformation approach for network alignment
- H. Habrich: Heavily constraining common sites of global and regional solutions for network alignment

# Realization of IGS Polyhedron and Preliminary European Densification

	Weekly	Cumulative
<b>IGS</b>	<b>Coordinates and velocities of 51 high quality global distributed stations aligned to ITRF-2000</b>	
	↓	
	<b>IGS Polyhedron</b>	
	~ 130 global stations	~ 130 global stations
<b>EUREF</b>	<b>IGS Polyhedron fixed</b>	
	~ 40 European stations	~ 40 European stations
	↓	
	<b>EPN Polyhedron</b>	
	~ 130 European stations	~ 130 European stations

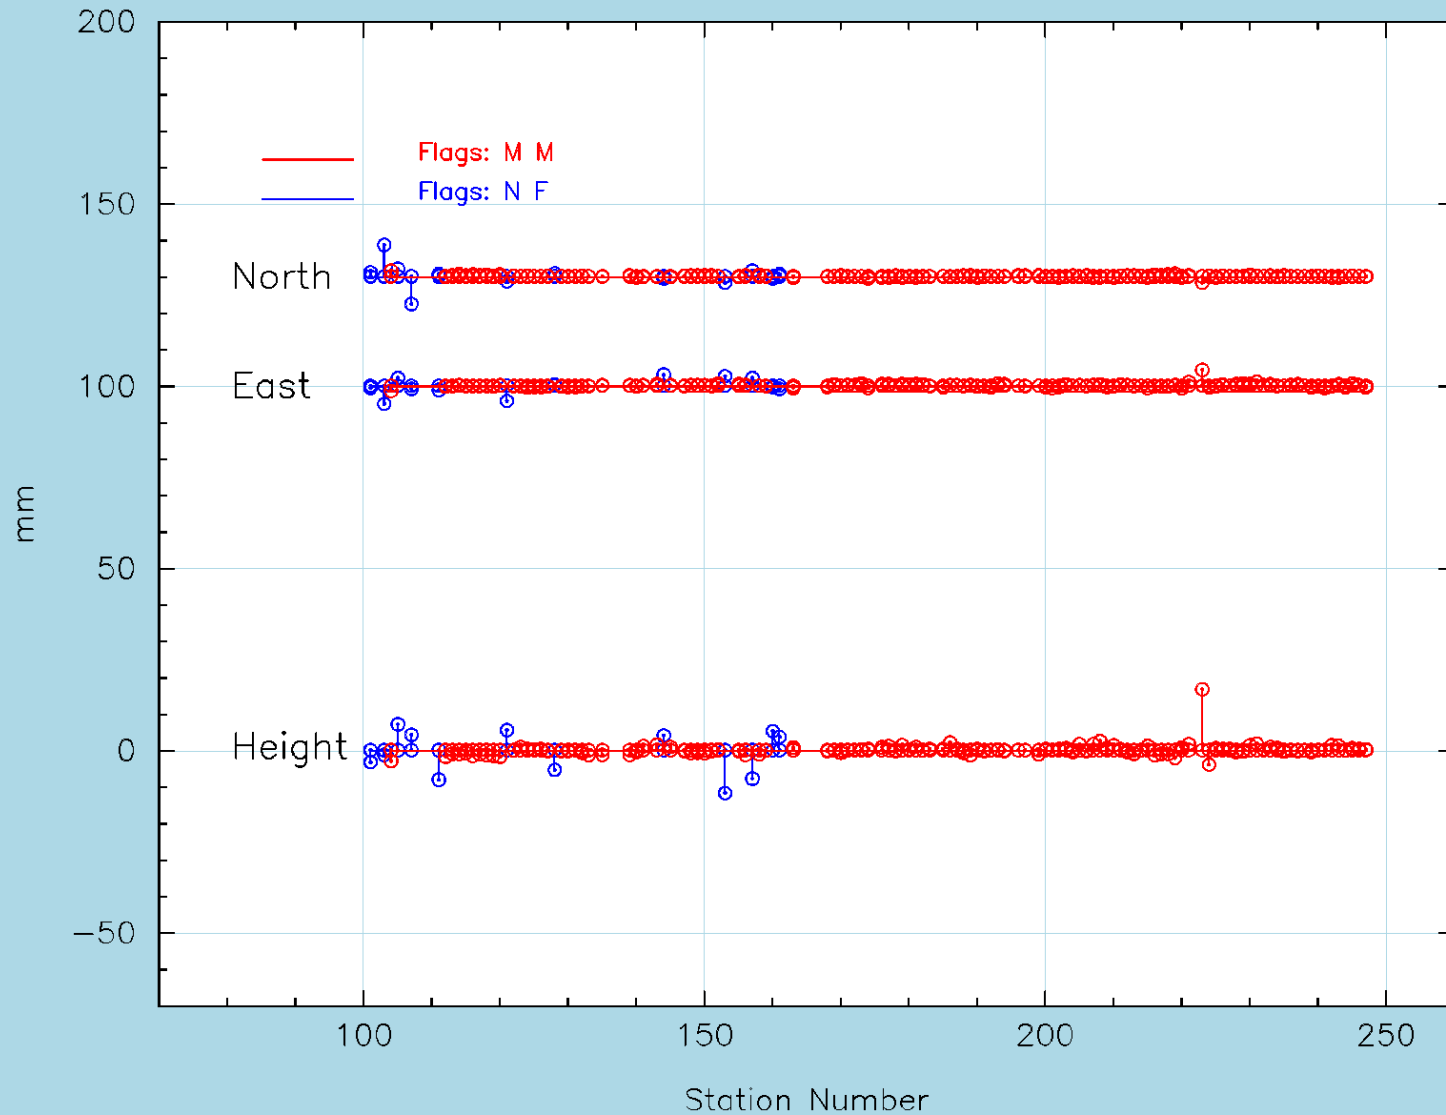

Preliminary

# Reference Frame Alignment of Weekly EPN Solutions

---

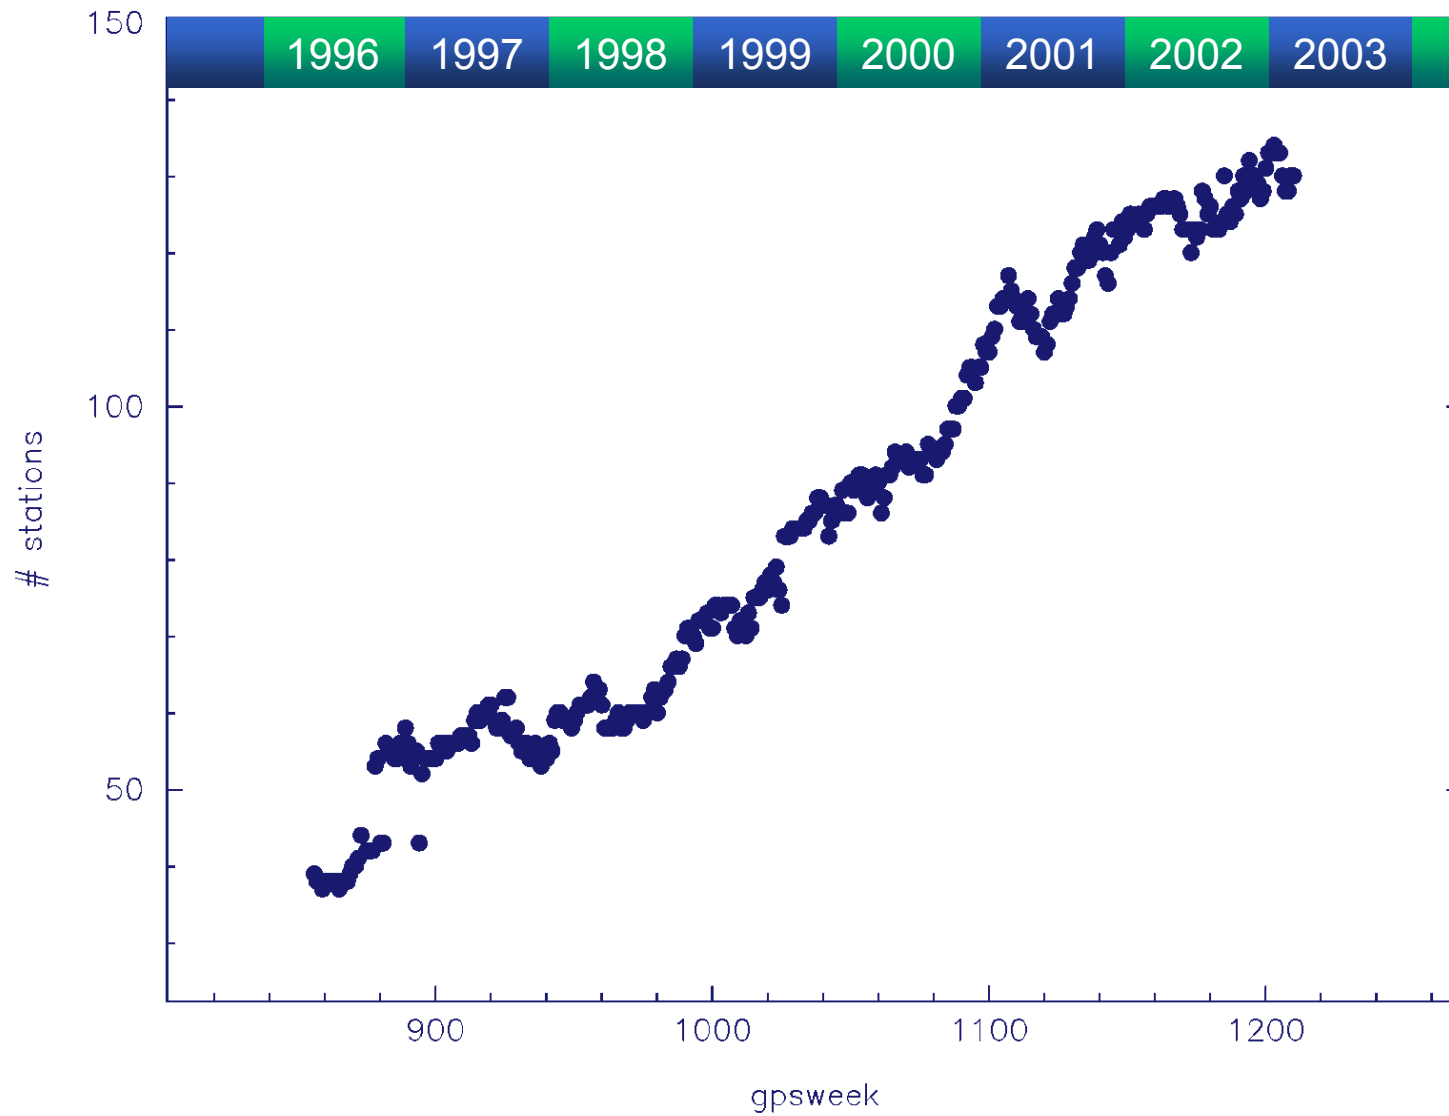

- ITRF-2000 coordinates of 12 EPN stations are hold fixed (constrained to sub-millimeter level)
- Generation of weekly SINEX files
- A-priori constraints are included in SINEX files
- Product usage:
  - Direct extraction of coordinates and co-variances
  - Removal of constraints for new reference frame definition or cumulative solutions generation
- Example for usage:
  - Contribution to ITRF-2000 (cumulative solution)

Residuals of 7 Parameter Helmert Transformation file EUS1151N.RES

# Number of Stations in EPN Analysis

# Distribution of Exclusions

Year 2001

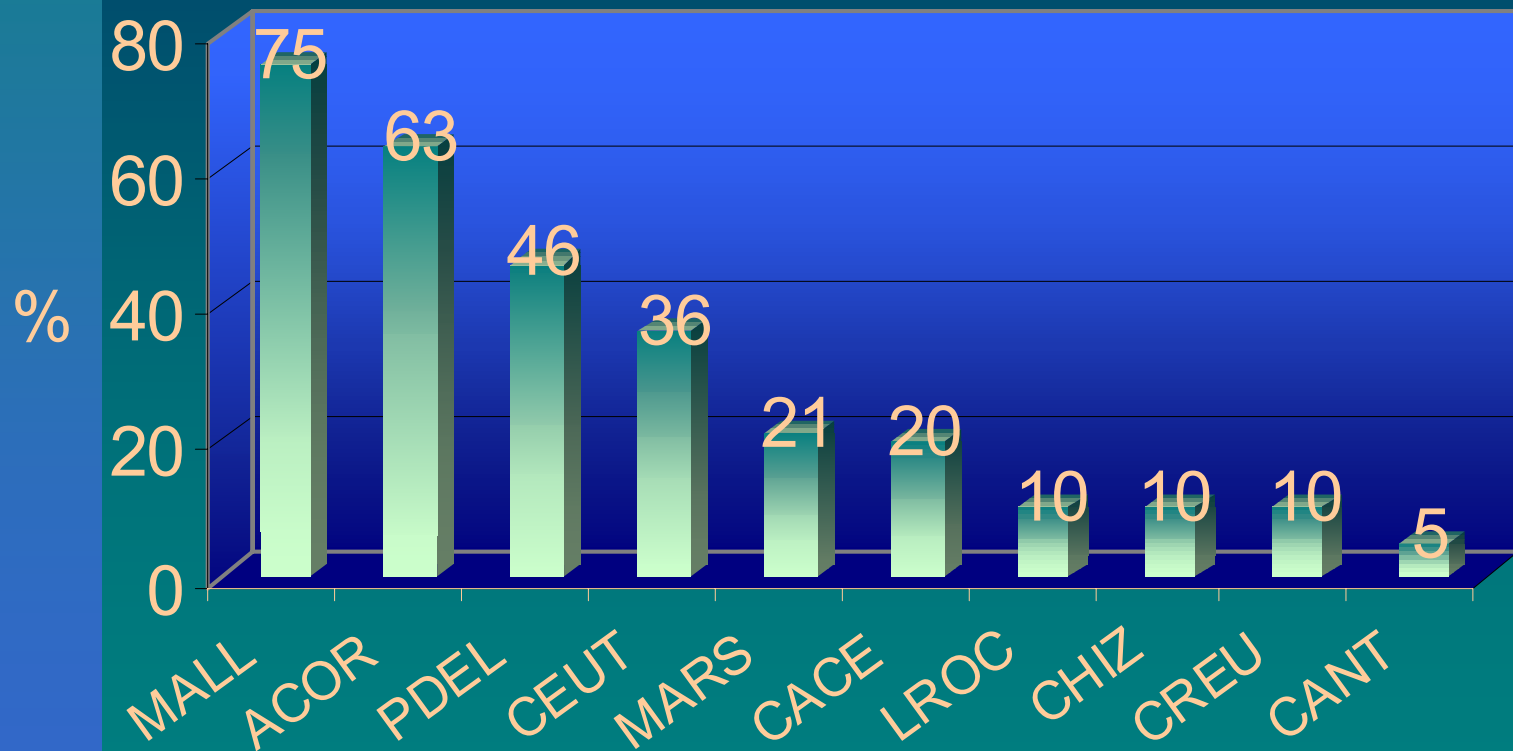

# Distribution of Exclusions

# Exclusions in DEO Sub-Network

Weeks 1190 - 1210

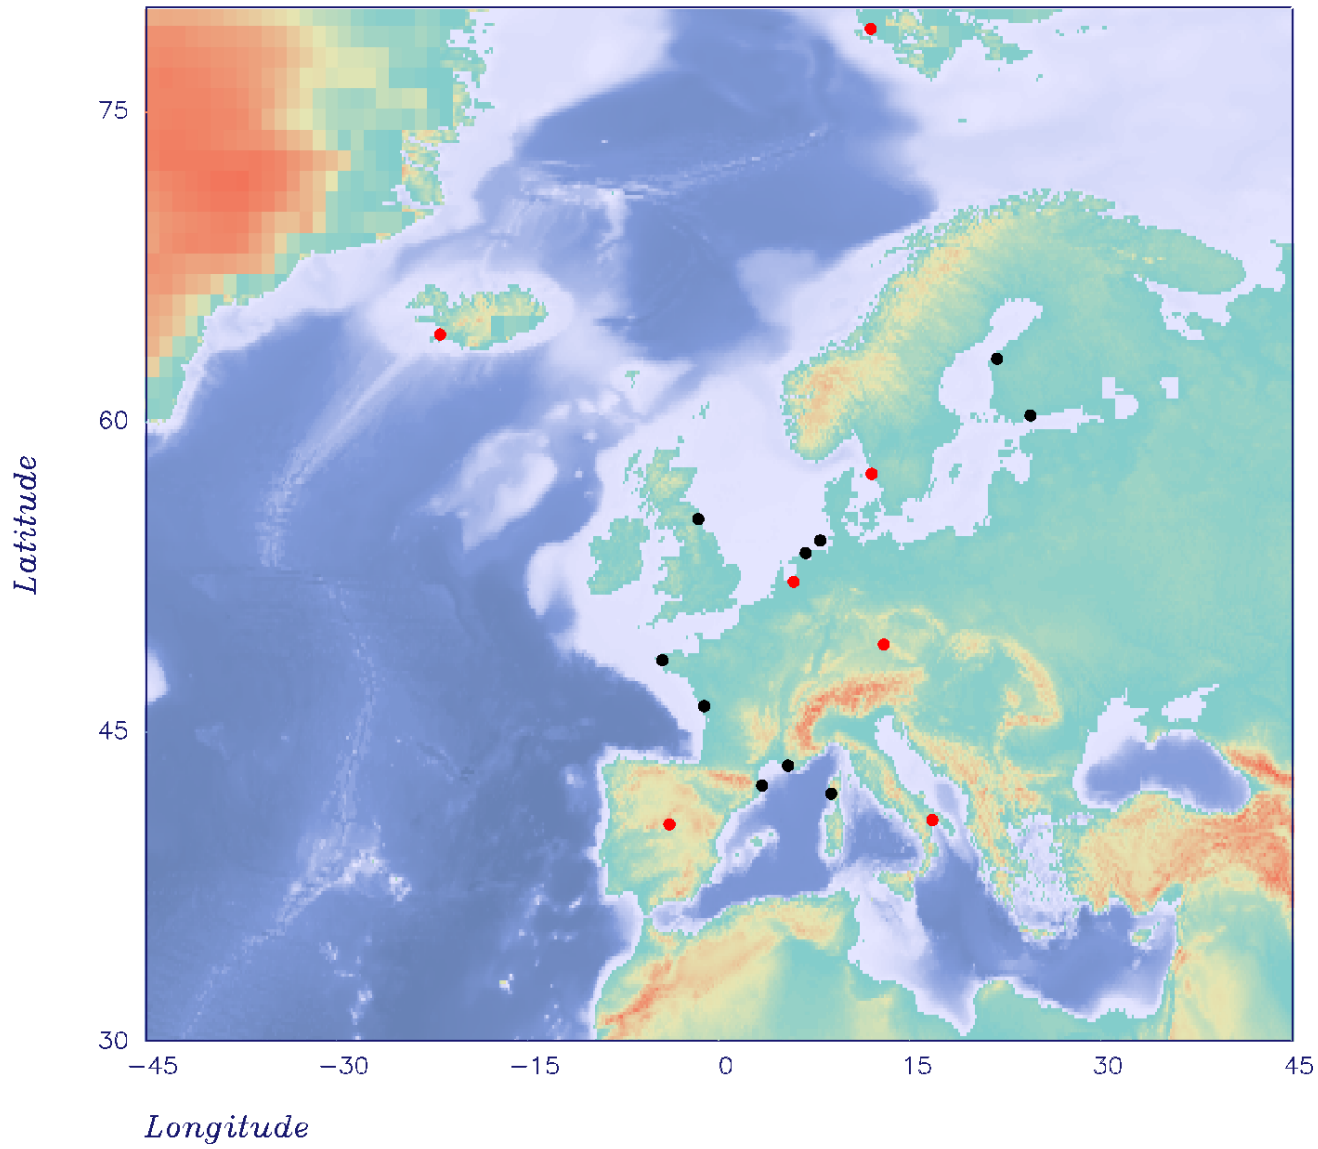

# TIGA-Pilot Project

---

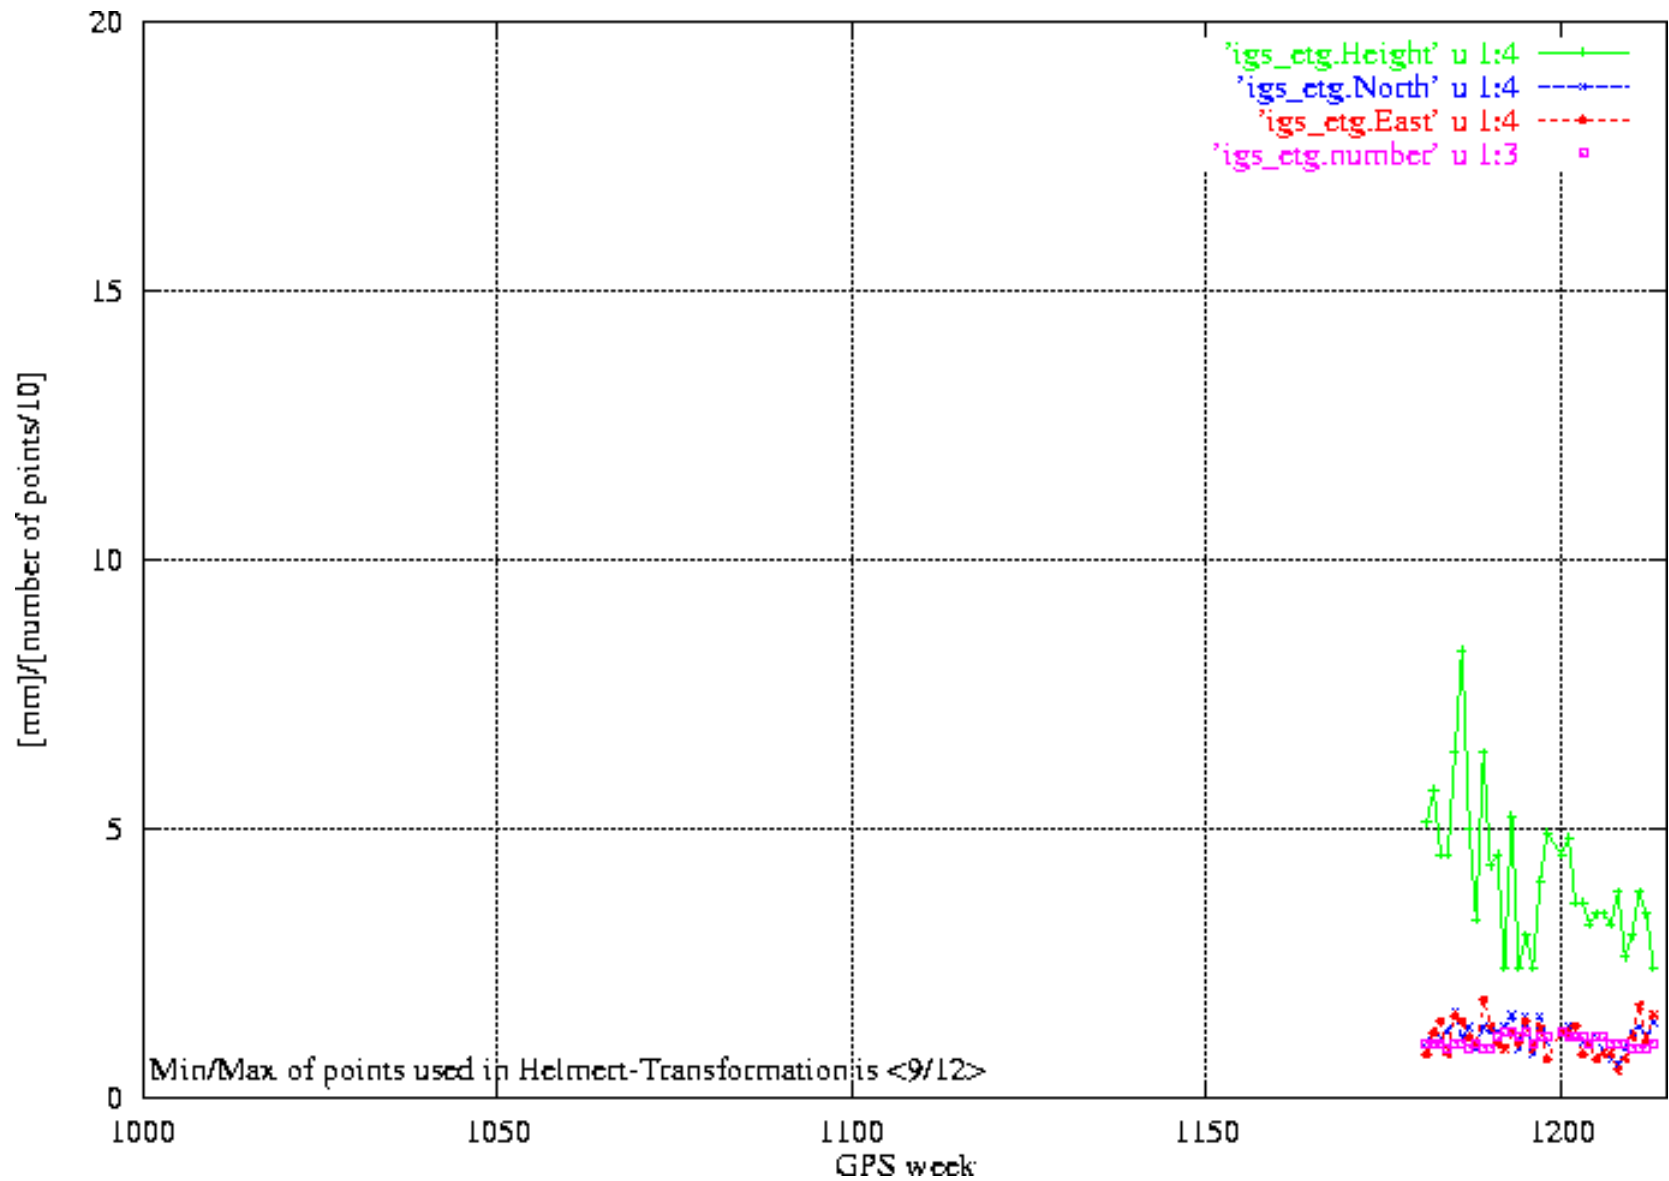

- EUREF proposal for participation in TIGA-PP as Analysis Center accepted
- Generation of a TIGA-PP sub-network from the combined solution
- All EPN stations which meet the TOS (TIGA observing station) standard
- Actually 7 stations for connection to ITRF2000
- „loosely constrained“ solution (1 m a-priori sigma for connection sites)
- SINEX file [ETGwww7.SNX](#) submitted to ftp-server at GFZ

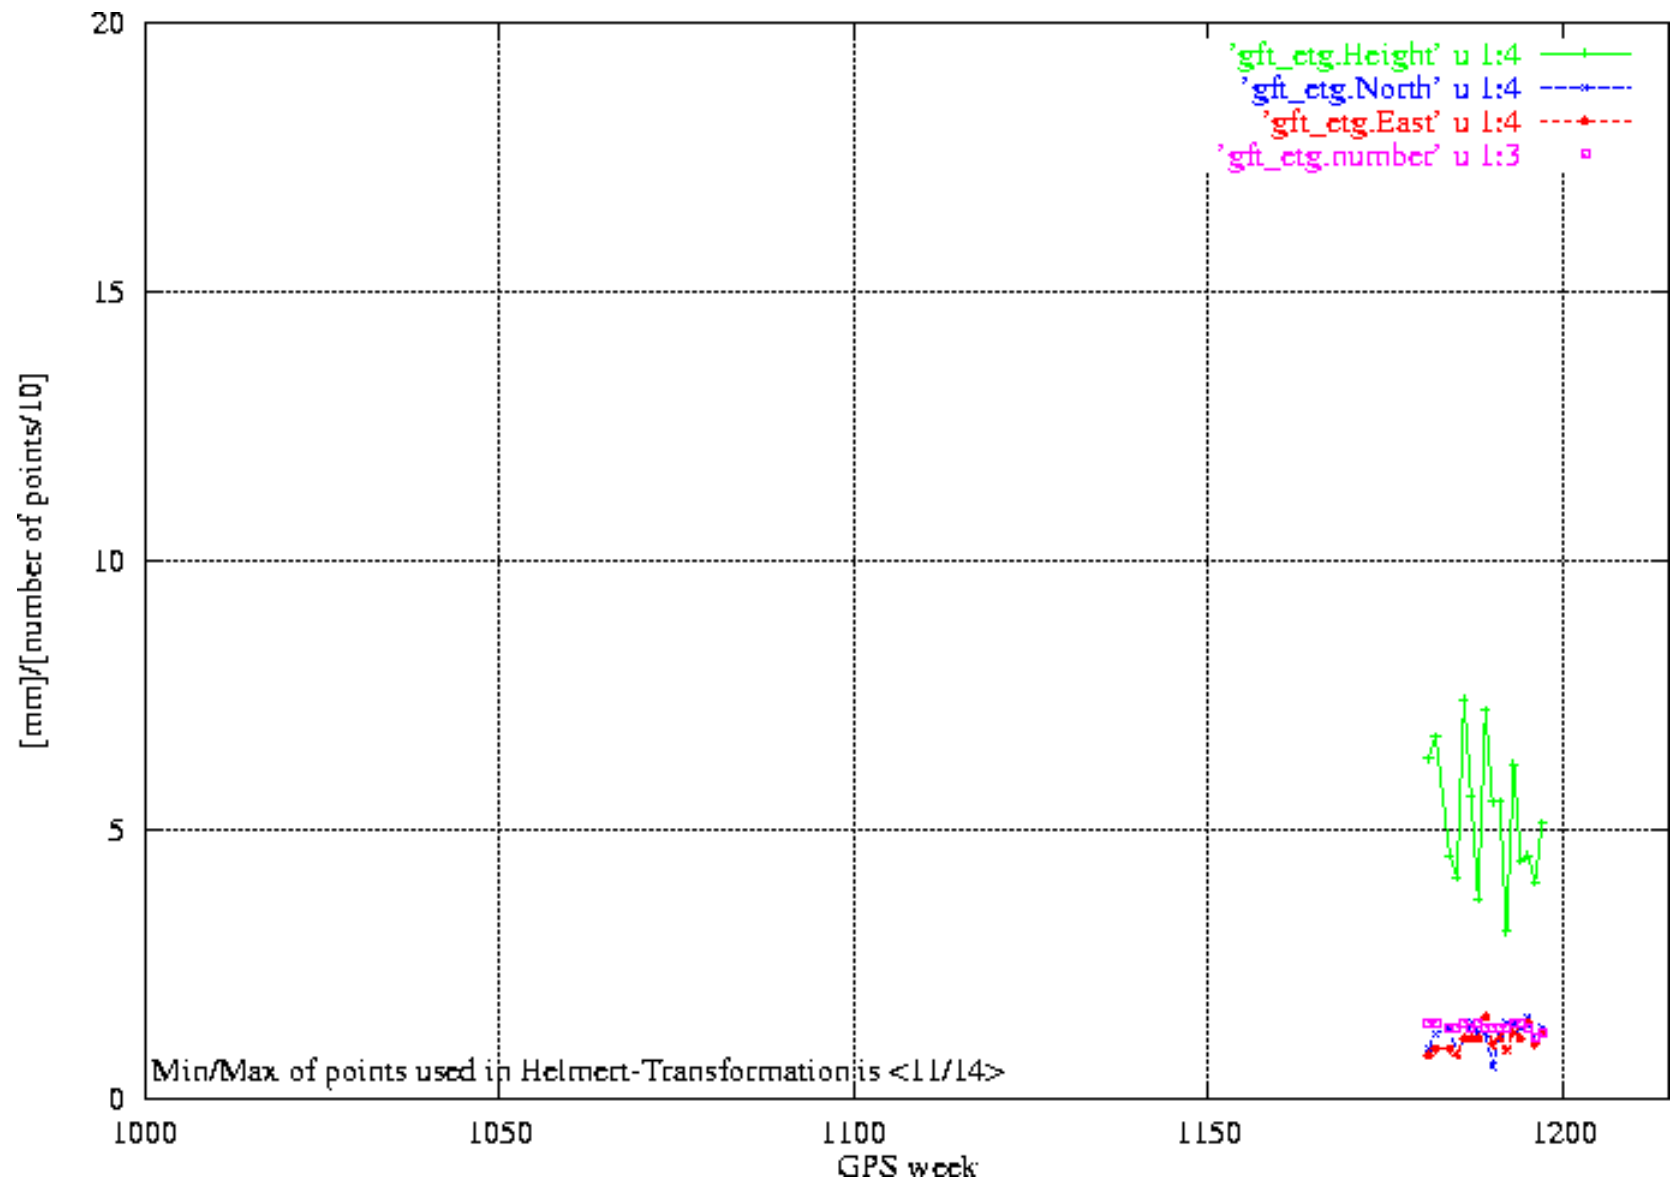

• Reference  
• TOS

# Comparison between EPN Sub-Network for TIGA-PP and IGS Network

# Comparison between EPN and GFZ Sub-Network for TIGA-PP

# Summary

---

- Continuously improving consistency of all LAC solutions
- Constraining all station coordinates reduces troposphere biases
- Minimum-constraints are a promising alternative for reference frame alignment
- Contribution of EPN to new projects, e.g., TIGA, ESEAS, ECGN

---

---

*Thank you!*
