Welcome !

EUREF Permanent GNSS Network

The [European Terrestrial Reference System 89](#) (ETRS89) coordinate system throughout Europe. Supported by the EU, this reference system forms the backbone for all geographic and geodynamic projects on the European territory both on a national as on an international level.

The ETRS89 is maintained by the IAG sub-commission [EUREF](#) and it is accessed through the EUREF Permanent GNSS Network (EPN), a science-driven network of

- Data analysis
- Daily/weekly positions
- Positions & velocities
- Tropospheric delays
- ETRF/ITRF transformation**
- Position time series
- Satellite orbit & clock correction streams

ETRF/ITRF Transformation

The following tool allows to transform coordinates (position and velocity) from any ETRFxx to any ITRFyy (or ITRFyy to ETRFxx). In case input and output coordinates are requested at different epochs, then station velocities are mandatory.

Input

Frame :

Epoch :

```
# Lines starting by # are treated as comments
# Fields (in decimal format) should be separated by at least one space
#
# --> Example without velocity - StationName(no space character) X[m] Y[m] Z[m] :

http://itrf.ign.fr/trans_para.php

The screenshot shows the website interface for ITRF transformation parameters. At the top left is the ITRF logo, which includes a globe and the text 'International Terrestrial Reference Frame ITRF'. To the right of the logo is a search bar with the text 'Search by DOMES number :', an input field, and a 'SEARCH' button. Further right are a help icon (question mark) and a vertical scale icon. Below the search bar is a horizontal line. On the left side, there is a vertical navigation menu with several items: 'ITRS and ITRF' (highlighted in blue), 'ITRF NEWS', 'General concepts', 'Splinter meeting', 'ITRF Products' (highlighted in blue), 'ITRF solutions', 'Transformation parameters' (highlighted in blue), 'VO Corner', 'Domes Numbers' (highlighted in blue), 'DOMES description', 'DOMES request', 'IERS Network' (highlighted in blue), 'Network description', 'Local surveys', 'Site Information and Selection', 'Get ITRF coord.' (highlighted in blue), 'Get coordinates', 'Selected points', and 'ITRF Mailing list' (highlighted in blue). To the right of the menu is a vertical scale with tick marks. The main content area is titled 'Transformation parameters' and contains a paragraph: 'The relationships linking the realizations of the ITRS is of utmost importance. They are based on transformation parameters (called Helmert parameters). They can be used to compare data or results expressed in two different ITRS realizations.' Below this paragraph is a list of four items, each preceded by a right-pointing triangle: 'Transformation Parameters between ITRF2008 and previous solutions', 'Transformation Parameters between ITRF2005 and ITRF2000', 'Transformation Parameters between ITRF2000 and previous solutions', and 'ITRS and WGS84'.

Final Remarks

We just use 3 basic formula:

- **ITRF_{yy}(t) → ITRF_{zz}(t)** *between diff. ITRF, same epoch*

$$\begin{aligned}
 X_{ITRF_{zz}} &= X_{ITRF_{yy}} + T(t) + D(t) \cdot X_{ITRF_{yy}} + R(t) \cdot X_{ITRF_{yy}} \\
 V_{ITRF_{zz}} &= V_{ITRF_{yy}} + \dot{T} + \dot{D} \cdot X_{ITRF_{yy}} + \dot{R} \cdot X_{ITRF_{yy}}
 \end{aligned}$$

- **ITRF_{yy}(t₁) → ITRF_{yy}(t₂)** *change epoch, same frame*
ETRF_{yy}(t₁) → ETRF_{yy}(t₂)

$$X(t_2) = X(t_1) + V \cdot (t_2 - t_1)$$

- **ITRF_{yy}(t) → ETRF_{yy}(t)** *between ITRF_{yy} and ETRF_{yy}*

$$\begin{aligned}
 X_{ETRF_{yy}}(t) &= X_{ITRF_{yy}}(t) + T_{yy} + \dot{R}_{yy} \cdot X_{ITRF_{yy}}(t) \cdot (t - 1989) \\
 V_{ETRF_{yy}} &= V_{ITRF_{yy}} + \dot{R}_{yy} \cdot X_{ITRF_{yy}}(t)
 \end{aligned}$$

Final Remarks

Do not forget... for those of you who want to do some testing

- Transformation parameters are time dependent → convert to epoch of the transformation
- Check units of transformation parameters → convert to SI
